

Miniature 5V Cooling Fan for Raspberry Pi (and Other Computers)

PRODUCT ID: 3368

. Description

Looking for another way to keep your Raspberry Pi *cool*? Hook up this **5V Mini Cooling Fan** and prevent your hard-working Pi from overheating! Of course, it's also great for use with any small computer or FPGA or motor driver or anything that needs cooling.

Plug the fan directly into your Raspberry Pi's 5V+GND GPIO power pins, as shown, for instant cooling! Place in your case, or even better, on top of your Pi's CPU to give it extra air-flow.

Compatible with any and all Raspberry Pi computers but only the Pi 3 runs hot enough to benefit from any cooling, when doing intense computations.

Note that you do not *need* a fan for your Pi, as it will automatically adjust its speed to avoid overheating, this is just for people who want to run it at top speed for a long time.

. Technical Details

Specifications:

- Operating voltage: 5V
- Current: 0.2 A
- Brushless DC fan
- Fan dimensions: 30mm x 30mm x 8mm
- Wire length: 3.25" / 80mm
- Fan weight: 6.2g / 0.22oz
- Mounting screws & nuts included
